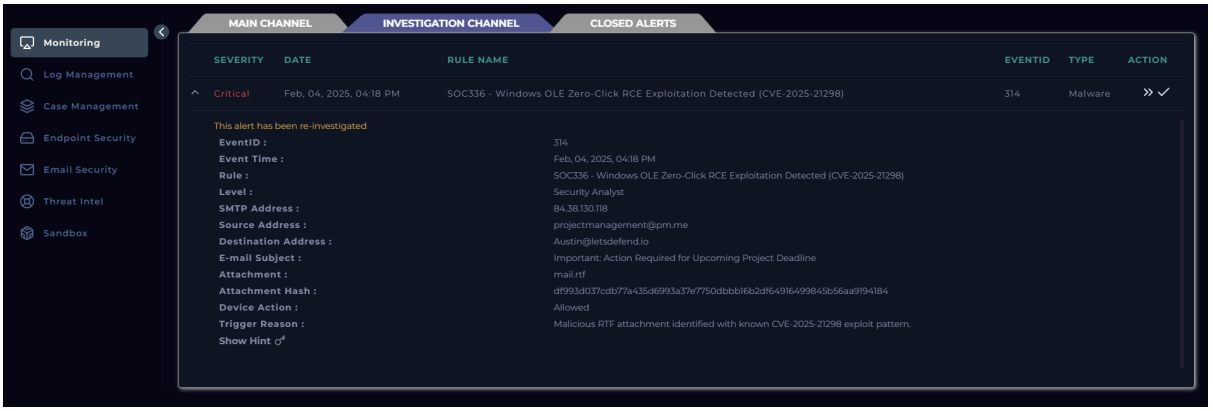
Executive Summary:

Summary: A critical alert was triggered regarding a "Zero-Click" Remote Code Execution (RCE) vulnerability (CVE-2025-21298). The attack originated from a malicious email containing an RTF attachment. The investigation confirmed successful communication with a Command and Control (C2) server.

Incident Details:

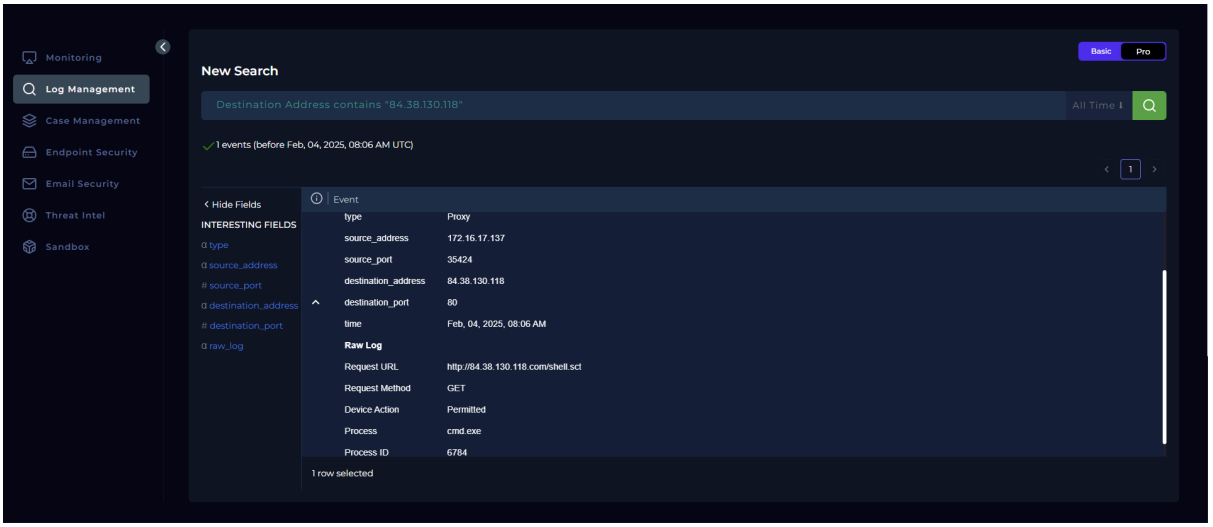
Detection Date: Feb 04, 2025
Victim Host: Austin (172.16.17.137)
Malicious File: `mail.rtf`
File Hash (SHA256):
`df993d037cdb77a435d6993a37e7750dbbb16b2df64916499845b56aa9194184`
Attacker IP (C2): `84.38.130.118`

Step 1: Alert Verification:
Verified the critical alert for CVE-2025-21298 in the SIEM dashboard.



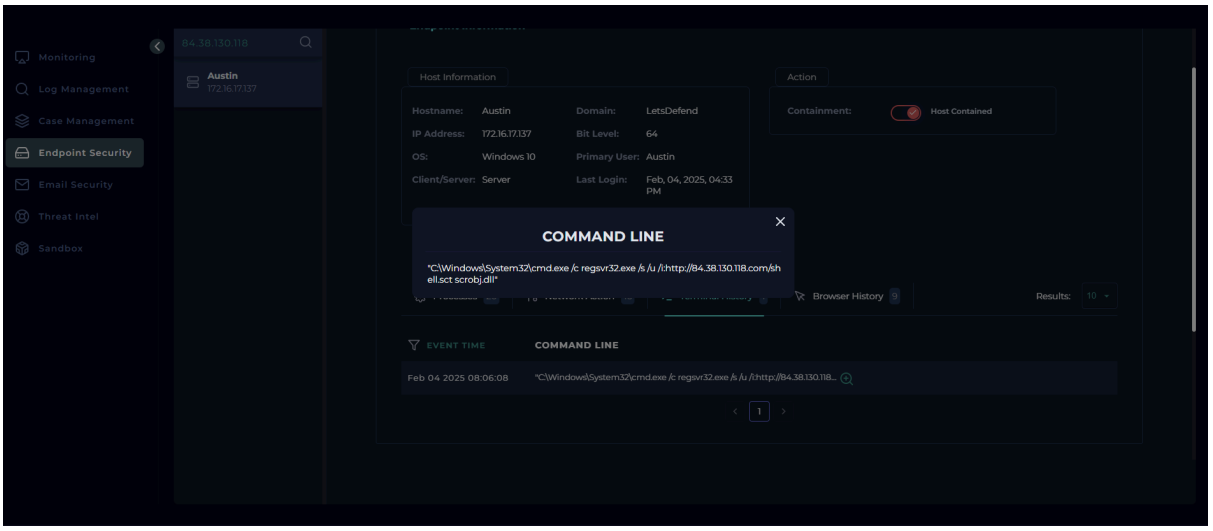
Step 2: Log Analysis:

"Identified a successful GET request to `http://84.38.130.118/shell.sct` initiated by `cmd.exe`."



Step 3: Scope Identification:

Performed a search for the malicious IP across the network; no other infected hosts were found.



Conclusion & Recommendations:

Verdict: True Positive. **Action Taken:** The host was isolated to prevent lateral movement. **Recommendation:** Conduct a company-wide phishing awareness training and ensure all systems are patched against CVE-2025-21298.
